## White Spirit 180 Solvent

### DEAROMATIZED ALIPHATIC HYDROCARBON FLUIDS

Specialty Distilled and Dearomatized White Spirit Solvent. White Spirits are characterized by mild odors, clean evaporation and solvency power to meet the requirements of a broad range of applications. White spirits are the products of a petrochemical refinery characterized by:

- A hydrocarbon with the number of carbons mainly in the C5-C15 range
- A typical boiling point range between 130 and 240°C
- Clear color-less solvent with very low water solubility

White Spirit 180 Solvent has very good solvent power and is therefore often used in applications such as: resins, paints, cleaning products, degreasers in dispensers or tubs, metal-working formulations and similar end users.

#### Typical Sales Specifications

Properties	Minimum	Maximum	Test Method
Appearance	Bright and Clear	Bright and Clear	ASTM D4176 Modified
Aromatic Content, vol.%	12	24	Liquid Chromatography
Color, (Saybolt)	27		ASTM D156 Modified
Distillation (°C ) IBP Dry Point	180	215	ASTM D86 Modified
Flash Point, (°C ) (Tag Closed Cup)	61.5		ASTM D56 Modified
Specific Gravity, 20°C	0.768	0.820	ASTM D1250 Modified
