Optimizing Oleochemicals Unit Operations Training Course

Introduction

The success of every company depends of each employee's understanding of the key business components. Employee training and development will unlock the companies' profitability and reliability. When people, processes and technology work together as a team developing practical solutions, companies can maximize profitability and assets in a sustainable manner. Training and development is an investment in future success - give yourself and your employees the keys to success

It is strategically important that your team understands the fundamentals of process unit operations concepts. This is the difference between being in the best quartile of operational ability and being in the last quartile. There is vast difference in the operational ability of operating companies and most benchmarking studies have confirmed this gap in operational abilities.

Whether you have a team of new or seasoned employees, an introduction or review of these concepts are very beneficial in closing the gap if you are not in the best quartile, or maintaining a leadership position. Most studies show that a continuous reinforcement of best practices in operational principles is the most effective way to obtain the desired results. Training and learning should be an on going continuous life long goal.

Course Objective

This course will guide the participates to develop key concepts and techniques for optimizing oleochemicals unit operations. These key concepts can be utilized to make operating decisions that can improve your unit's performance.

Many aspects of oleochemicals operations management can be improved including, product recoveries, purities and energy utilization, and safety. This cannot be achieved without first an understanding of basic fundamental principles of design and operation. These principles need to be understood in advance of operating and trouble shooting a process unit operation for the manager or problem solving to be effective.

This seminar focuses on the core building blocks of the oleochemicals process systems, equipment and economics. This program will emphasize the oleochemicals unit operation fundamentals, safe utilization of these fundamentals by operations, engineering, maintenance and support personnel.

There are many aspects of operational optimization. Partial list may include;

- 1. Safety
- 2. Reliability Continuity of Operations
- 3. Quality
- 4. Cost
- 5. People Development

1. Safety

Safety is the number one concern. No project or operation can be classified as optimized or best unless it is done safely. Many Studies show a strong culture of safety awareness also has economic benefits as well as the social and humane benefits.

2. Reliability - Continuity of Operations

A stable reliable plant is the largest revenue source. A reliable plant that has high cost will make generate more revenue than a low cost plant that has multiple outages. The on stream factor is a benchmark of reliability. Industry average is 97%, but the top quartile approaches 100%. This three percent increased production is a significant difference in revenue.

3. Quality

Quality has two aspects. The first is the external aspect. To develop and maintain the reputation of producing quality products will allow you to charge a premium during the economic up turns and be able to maintain your key customers in a down turn.

The second is the internal aspect. There is an added cost of non quality production. Sometime the product can be reprocessed, with an added energy debit. If the product cannot be reprocessed it will need to be sold with a cost debit.

Rev 3.0

4. Cost

Cost control is a very important aspect of operational optimization. The two largest costs are feedstock and energy. A very small feedstock reduction can lead to a very large profit improvement. The industry averages three percent energy improvement per year. The top quartile will improve more than 3%.

5. People Development

Most people might rate this higher than fifth. It is a very important aspect of operational excellent, but talent can be acquired for a price. The best plan is to hire talented people, train them well, pay them well, and retain them, but few companies seem to be capable of accomplishing this task. People Development will insure that items one through four are optimized.

Outline

Introduction

Overview of the Chemical Processing Industry

Review of Process Incidents

Safety for the Chemical Processing Industry

Fundamentals of Oleochemical Chemistry

- Description of a Oleochemical Molecule
- Definition and Function of a Catalyst
- Description of Oil and Fats Molecules
- Composition and Structure
- Minor Constituents of Oils and Fats
- Typical Specifications

Introduction to Petrochemical Key Concepts

- Unit Operations
- Process Flow Diagrams
- Mass Balance

Practical Engineering Guidelines for Processing Plant Solutions

Page 6 of 11 Rev 3.0

Introduction to Oleochemical Equipment

- Distillation
- Absorption
- Heat Exchange
- Reactors
- Pumps
- Compressors
- Furnaces
- Separation Vessels
- Decanter and Centrifuge Systems
- Dryer Systems
- Vacuum Systems
- Boilers and Steam Systems

Overview of the Oleochemical Process

Oleochemical Flow Sheet

Overview of Oil Extraction

- Mechanical Extraction
- Solvent Extraction
- Extraction Equipment
- Quality Control
- Safety Extraction and Electrical Issues

Palm Oil Milling and Palm Kernels Crushing

- Palm Oil Milling
- Extraction of Crude Palm Oil
- Treatment of POME (Palm Oil Mill Effluent) and biomass
- Extraction of Palm Oil Kernels
- Equipment
- Maintenance Guidelines
- Safety Milling and Crushing

Refining of Oils and Fats

- Physical Refining
- Chemical Refining
- Degumming
- Neutralization
- Bleaching
- Deodorization
- Palm Oil Stripping
- Equipment
- Safety

Modification of Oils and Fats

- Hydrogenation
- Interesterification
- Fractionation
- Blending
- Equipment
- Safety

Fatty Acids and Glycerin

- Fatty Acid Distillation Overview
- Glycerin Distillation Overview
- Equipment
- Safety

Fatty Alcohols and derivatives

- Fatty Alcohols Production
- Surfactants
- Ethoxylation
- Sulphation
- Derivatives
- Equipment
- Safety

BioFuels

- Overview Bio Processing
- Achieving Renewable Energy Goals
- Bio Diesel Production
- Hydrotreated Vegetable Oil (HVO) Production
- Sustainable Aviation Jet Fuel (SAF) Production
- Equipment
- Safety

Process Equipment Troubleshooting

- Troubleshooting concepts and techniques
- Typical Problems
- Interaction of Process and Equipment
- Tower Scan Case Study
- Tower Inspection Case Study

Plant Reliability

- Introduction to Plant Reliability
- Equipment Design for improved Reliability

Who Should Attend:

- People who are making day to day decisions regarding operation, design, and economics of processing plants;
 - 1. 1st Line Operations personnel,
 - 2. Operation Supervisors,
 - 3. 1st Line Maintenance personnel,
 - 4. Maintenance Supervisors,
 - 5. Senior Plant Supervisors,
 - 6. Operations Engineers
 - 7. Process Support Engineers,
 - 8. Design Engineers,
 - 9. Cost Engineers
 - 10. Environmental Professionals
 - 11. Chemist
 - 12. Sales and Marketing Specialist
- Ideal for veterans and those with only a few years of experience who want to review or broaden their understanding in Processing Plant Operations.
- Other professionals who desire a better understanding of subject matter

What you can expect to gain:

- A detailed overview of Oleochemicals operations, processes and economics
- Gain an understanding of the equipment of Oleochemicals
- Gain an understanding of the Oleochemicals flow sheets
- Gain an understanding of chemistry and catalyst
- Troubleshooting Techniques
- Gain an insight to optimization strategies
